

Miniature CAIS Overhead Module

Applications

- CAIS Applications
- Distributed Systems

Features

- CAIS Bus port for communication with the “Master” and daisy-chain CAIS Bus output for connection to downstream remote units
- Has Remote Unit ID strapping provisions
- Contains a 32Kx16 EEPROM
- Has a 12-bit Analog to Digital Converter (ADC)
- Supports Simultaneous Sampling
- Accepts preconditioned analog data from various Remote I/O modules
- Provides eight (8) programmable secondary gains
- Provides 4,096 programmable secondary offsets (12-bit DAC)
- Operates at up to 416 KSPS (5 MBPS at 12-bits-per-word)

Description

The MRCI-105 module performs the control functions for the remote I/O module within a MEDAU/MCDAU/MWDAU data acquisition unit. This module provides the interface with the “master” via the CAIS Bus (command/response bus), and provides the internal data interface for all remote I/O modules.
