

Filter Driver Module for use with the MMCI/MMEI-105 module

Applications

- Stand-alone Data Acquisition
- Distributed Systems

Features

- Operates as a module set with the MMCI/MMEI-105 for use as a master controller in the MCDAUMEDAU-2000
- Provides programmable pre-modulation filter for the MMCI/MMEI-105 PCM output.
- Accepts External Clock input for the MMCI/MMEI-105 module controller
- Provides MMCI/MMEI-105 CAIS/E-Bus controller clock output as Differential Outputs for 2X Bit Clock, Bit Clock, Word Clock, Minor Frame Clock, Major Frame Clock, and PCM Data.

Description

The MFDR-105 module is used as a module set with the MMCI/MMEI-105 Controller to provides a fully programmable pre-modulation PCM filter output . The module also contains receivers and drivers for multiple input and output clocks.
