

## Miniature Power Interface Module

### Applications

- Limited Installation Room
- Improved Accessibility

### Features

- Miniature Power Interface Module
- Separate the Power Supply Module from Overhead and I/O Modules
- Single Cable Connection to the MPSM-2000 Power Supply's "J2" Connector
- Supports a "Star Configuration" where Two (2) MPIM-2000-2 Modules are Hooked up to a Single MPSM-2000 Power Supply
- Optional Interconnect Cable Available

### Description

The MPIM-2000-2 is a plug-in module that can be used with TTC's MEDAU/ MCDAU-2000 products to enable a "split stack" configuration. The split stack configuration physically splits the power supply module ( the MPSM-2000) from the remainder of the overhead and I/O modules. This reduces the overall length of the system and is useful in applications where installation room is at a premium.

Revision 02/23/2009
