

## PC Based, ISA Slot-Compatible CAIS Programming & Test Card

### Applications

- Ground Support Equipment
- CAIS Bus Emulation
- Stand-alone CAIS Bus Controller

### Features

- CAIS Programming Card
- PC-Based Plug-in Version of the CPM-2000SA
- Functions as a CAIS “Master Controller for up to 5 Mbps PCM
- Contains an EEPROM format memory using “true subcommutation”
- Provides the Fundamental System Sampling Rate
- RS232 Interface Port for Format Loading, Programming Remotes, and Data Monitoring
- CAIS Bus interface/Repeater Port for Format Loading and Programming CAIS System Controller & Remotes
- System Audit and Configuration are Supported through this Card
- Windows 95/98/NT/2000 Software Included

### Description

The CPM-2000 is a PC-based plug-in card used to program and check out CAIS-compatible equipment such as TTC’s MCDAU/CDAU series products. The card has one standard CAIS bus interface, one RS-422 CAIS repeater port and one RS-232 serial programming port. The card can operate as a CAIS Master Controller for system test, integration, and diagnosis purposes. It can also be used to program a CAIS System Controller Unit through a built-in RS-422-based CAIS repeater port. A serial RS-232 port provides for setup, programming, data monitoring and system audit/configuration. The card is powered from the host PC’s ISA bus.

Revision 04/06/2009
